

Studio 1 is used both as a rehearsal room and as an stage. The room has white stonewalls, vaulted ceiling and the floor is wood parquet. The studio has both black and white vinylfloor, and the vinyl covers the entire floor. There is 4 lengthwise aluminium pipes in the ceiling that makes it possible to suspend lights, speakers or props in the ceiling (it is not possible to suspend heavy weight or personnel lifting from the pipes). Always contact MDT technician before you start rigging. The vaulted ceiling is also covered with white square acoustic tiles. There are two entrances to the studio. One is in connection with the stairwell and the other is adjacent to Studio 2. Both are emergency exits and must not be blocked. Both doors have standard dimensions. Audience entrance, in and unloading takes place through the door to the stairwell. Studio 1 has no windows. One of the short ends is a wooden panel with electricity and ventilation shaft. Ventilation can be increased if needed. The wooden panel also has a smoke detector that can be turned off if an fog machine is used.

Dimensions: 11 x 8 m stage area including audience.

Height: 5 m to highest point in the cellar vault. The ceiling starts to arch 2.20 m from the floor.

Seating capacity: 40 people. The audience seat is built up from simple wooden benches in different sections.

Electricity: 32 amp + regular sockets for electricity.
